

AgentFlowAI Project Report

Project Idea: enterprise multi agent chatbot using langraph

Domain: Artificial Intelligence

Requirement Questions:

1. What are the primary use cases for the enterprise multi-agent chatbot, and which business functions will it support?
2. How will the chatbot integrate with existing systems and infrastructure, such as CRM, ERP, or helpdesk software?
3. What is the expected volume of conversations the chatbot will handle, and what are the peak hours of usage?
4. What are the key performance indicators (KPIs) to measure the chatbot's success, such as resolution rate or customer satisfaction?
5. How will the chatbot's knowledge base be populated, updated, and maintained to ensure accuracy and relevance?
6. What are the security and compliance requirements for the chatbot, such as data encryption or GDPR adherence?
7. How will the chatbot handle handoffs to human agents, and what are the criteria for escalating conversations?
8. What is the desired user experience for interacting with the chatbot, including tone, language, and personality?
